### **DETAILED ACTION**

## Specification

1. The disclosure is objected to because of the following informalities: Within paragraph 4 on page 7, figure numbers of 34 and 92 are labeled incorrectly.

Appropriate correction is required.

#### Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claim 11 is rejected under 35 U.S.C. 102(b) as being anticipated by Konrad et al (US 6,363,731 B12).

With regard to claim 11, Konrad et al. discloses liquefying water vapor by a condenser (5) where the water vapor is discharged from a fuel cell stack (1), diverting the water to a liquid water circuit (10), and compressing the gases by a compressor (8).

#### Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 1709

5. Claims 7 – 10 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Konrad et al (US 6,363,731 B12) in view of Jonqueres (6,128,909).

With regard to claims 7-9, Konrad et al. discloses an extraction method to remove a liquid from a gas, where a fuel cell stack (1) has a cathode exhaust gas/residual gas, consisting of water vapor (col. 3 lines 18 –20), and water vapor from the fuel cell (1) is recycled back into the system (10). Konrad et al. fails to disclose that the exhaust gas/residual gas from the fuel cell stack (1) first enters the compressor, then a condenser and finally a turbine before leaving the system.

Jonqueres also discloses a water/liquid removal system in which air (11) entering the system goes to a set of compressors (16a, b), then a condenser (23) via heat exchangers (12 a, b and 13), and turbines (26, 32) to remove the water from the air and where the compressor (16b) is mechanically tied to the turbines (26, 32, col. 12 lines17-20) in order to provide a more efficient system (col. 12 lines 15 -25).

It would have been obvious to one of ordinary skill in the art at the time of the invention to replace the order of the compressor and turbine of Jonqueres in the system of Konrad for a more efficient system.

With regard to claims 10 and 12, in view of claim 7, Konrad et al. further discloses that the liquid extraction method, as discussed above, can be used in a drive system for a vehicle with a gas generating system/reformer (not shown, col. 3 lines 50-54) and a low temperature fuel cell (col. 2 lines 25-34).

Application/Control Number: 10/534,499

Art Unit: 1709

#### Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Maria J. Laios whose telephone number is 571-272-9808. The examiner can normally be reached on Monday - Thursday 9:30 - 6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Alexa Neckel can be reached on 571-272-1446. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
